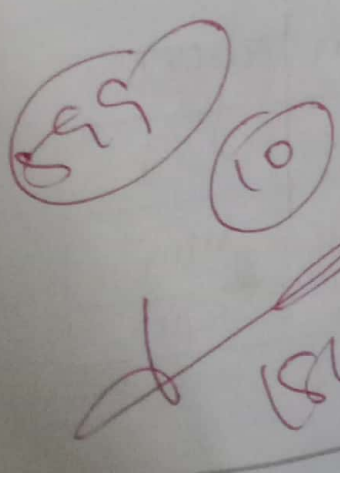
AI Assignment 19RCLIA0599.

Step1:

Outlook	Temperature	Humidity	Windy	hours top
Rainy	Hot	high	False	25
Rainy	Hot	high	True	30
Overcast	Hot	high	False	46
Sunny	mild	high	False	45
Sunny	Cool	normal	False	52
Sunny	cool	normal	True	23
Overcast	cool	normal	True	.43
Rainy	mild	high	False	35
Rainy	cool	normal	False	38
Sunny	mild	normal	False	46
Rainy	mild	normal	True	48
Overcast	mild	high	True	52
overcast	hot	normal	False	44
Sunny	mild	high	True	30



18/11/21

Step2:

Calculate SD, CN, mean

$$mean = \frac{\Sigma x}{n}$$

$$\frac{25+30+46+45+52+23+43+35+38+46+48+52+44+30}{14}$$

$$\frac{557}{14} = 39.78$$

$$SD = \sqrt{\frac{\Sigma (x-mean)^2}{n}}$$

$$SD = 9.67$$

$$CN = \frac{SD}{Mean} \times 100 = \frac{9.67}{39.78} \times 100 = 24.30$$

Step3

Dataset is split on different attributes the SD of each branch is calculated.

$SD(attr) = \Sigma \omega(branch)\, SD(branch)$ & the result is standard deviation reduction

$$SDR = SD - SD(attr)$$

$\therefore SD(Target) = 9.67$

Outlook

	mean	SD	CV	n	ω(CV)
Rainy	35.2	8.7	24.7	5	5/14
Overcast	46.25	4.03	8.72	4	4/14
Sunny	39.2	12.2	31.0	5	5/14

19CUA0599

SD (outlook) = $\frac{5}{14}(8.7) + \frac{4}{14}(11.03) + \frac{5}{14}(12.2)$

8.59

SDR (outlook) = SD(Target) - SD(outlook)

9.67 - 8.59

1.08

Temp:

	mean	SD	CV	n	w(v)
hot	36.25	10.34	30.6	4	4/14
cool	39	12.14	31.1	4	4/14
mild	42.6	3.38	19.65	6	6/14

SD (Temp) = $\frac{4}{14}(10.34) + \frac{4}{14}(12.14) + \frac{6}{14}(3.38)$

10.01

SDR (Temp) = 9.67 - 10.01

-0.34

Humidity:

	mean	SD	CV	n	w(v)
high	37.51	10.11	26.93	7	7/14
normal	42	9.4	27.4	7	7/14

SD (humidity) = $\frac{7}{14} \times 10.11 + \frac{7}{14} \times 9.14$

9.77

SDR (humidity) = 9.67 - 9.77

-0.1

windy:

	mean	SD	CV	n	w(v)
True	37.6	11.6	30.8	6	6/14
False	41.3	8.41	20.3	8	8/14

$SD(windy) = \frac{6}{14} \times 11.6 + \frac{7}{14} \times 8.41$

9.77

$SDR(windy) = 9.67 - 9.77$

-0.1

The value that has highest SDR is considered as root node (i.e. decision node)

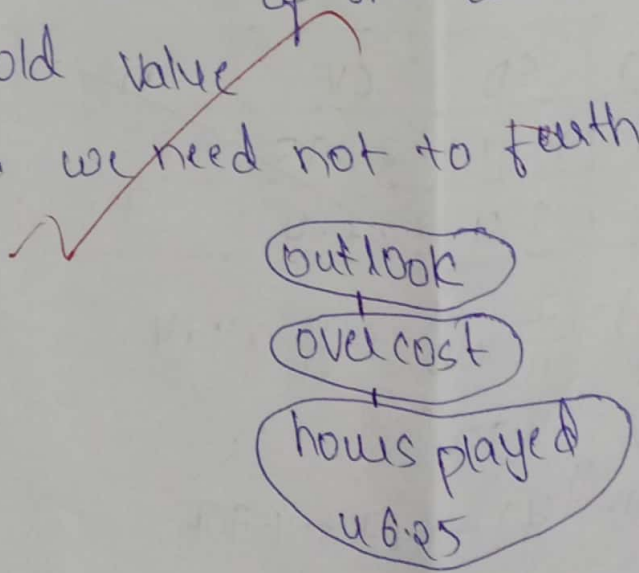
considering temination criteria

CV is 10%. or CV is ($n \leq 4$)

outlook

overcast has CV of 8%. which is less than threshold value

∴ we need not to further split



19KU1A0599

We need to split node sunny and Rainy

Outlook	Temp	humidity	sunny	Rainy.
Sunny	mild.	high	false	45
Sunny	cool	normal	false	52
Sunny	cool	normal	True	23
Sunny	mild	normal	~~false~~	46
Sunny	mild	high	True	30

mean = 39.2

SD = 12.2

CV = 31.0

Temp:

	mean	SD	CV	n	w(v)
mild	40.3	8.96	22.23	3	3/5
cool	37.5	20.50	54.66	2	2/5

$SD(Temp) = \frac{3}{5}(8.96) + \frac{2}{5}(20.50)$

13.576

$SDR(Temp) = 12.2 - 13.576$

-1.37

humidity:

	mean	SD	CV	n	w(v)
high	37.5	10.6	28.26	2	2/5
normal	40.3	15.30	37.96	3	3/5

SD (humidity) $= \frac{2}{5}(10.6) + \frac{3}{5}(15.30)$

$6.4(10.6) + 0.6(15.30)$

13.42

SDR(humidity) $= 12.2 - 13.42$

-1.22

Windy:

	mean	SD	CV	n	(CV)
false	47.66	3.78	7.94	3	315
true	26.5	4.94	18.65	2	215

SD(windy) $= \frac{3}{5}(3.78) + \frac{2}{5}(4.94)$

4.23

SDR(windy) $= 12.2 - 4.23$

7.97

then check for highest SDR

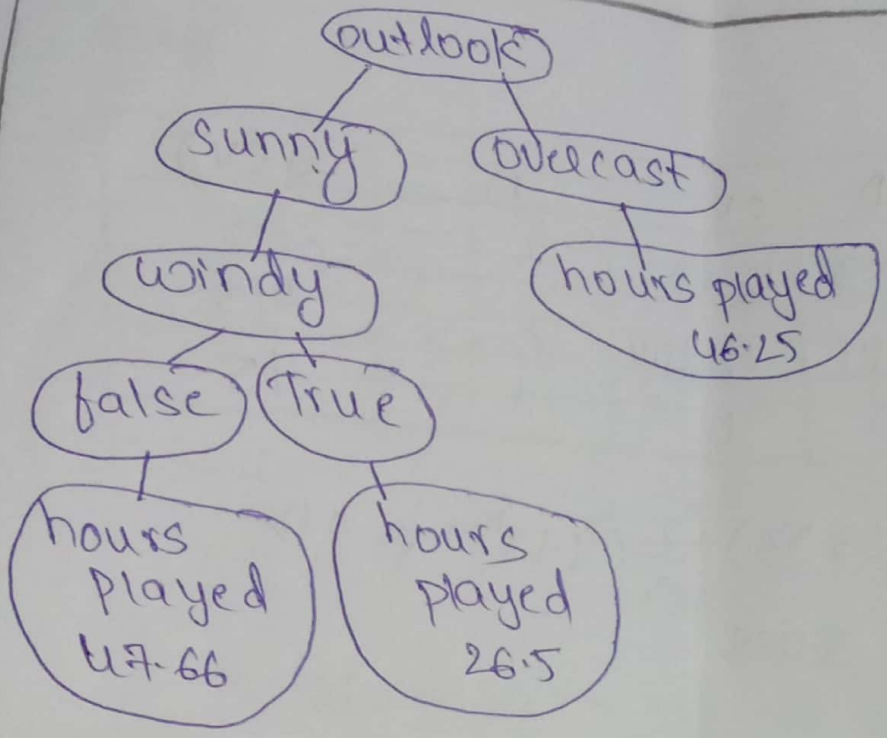
In outlook, among Temp, humidity and windy SDR value is high for windy

SDR = 7.97

Then, check for CV value

both True & false satisfy the CV value.

19KU1A0599



Rainy:

Outlook	Temperature	humidity	windy	hours to play
Rainy	hot	high	false	25
Rainy	hot	high	True	30
Rainy	mild	high	False	35
Rainy	Cool	normal	false	38
Rainy	mild	normal	True	48

∴ mean = 35.2

SD = 8.7

CV = 24.4

Temp

	mean	SD	CV	n	ω(V)
hot	27.5	3.53	12.13	2	2/5
mild	41.5	9.19	22.164	2	2/5
cool	38	0	0	1	1/5

$$SD(Temp) = \frac{2}{5}(3.53) + \frac{2}{5}(9.19) + \frac{1}{5} \times 0$$

5.088

SDR(Temp) = SD - SD(Temp)

8.7 - 5.088

3.612

Humidity

	mean	SD	CV	n	ω(V)
high	30	5	16.66	3	3/5
normal	43	7.07	16.44	2	2/5

$$SD(humidity) = \frac{3}{5}(5) + \frac{2}{5}(7.07)$$

5.828

SDR(humidity) = SD - SD(humidity)

87 - 5.828

2.872

windy.

	mean	SD	CV	n	w(n)
false	32.66	6.80	20.85	3	3/5
true	39	12.72	32.5	2	2/5

$$SD(windy) = \frac{3}{5}(6.80) + \frac{2}{5}(12.72)$$

$$9.168$$

$$SDR(windy) = SD - SD(windy)$$

$$9.7 - 9.168$$

$$-0.468$$

Among Temp, Humidity and windy the SDR value is high for Temperature (i.e., 8.612)

Then, check for CV value of hot, mild, cool

satisfy the CV value
